

The Flow Show

Let them eat data

Scores on the Doors: oil 59.0%, global stocks 15.1%, US stocks 13.2%, gold 3.8%, HY bonds 2.5%, cash 2.5%, US dollar 0.7%, IG -0.5%, govt bonds -1.4%, bitcoin -7.0% YTD.

The Price is Right: 99% probability ECB hikes Sept 10th, 53% Fed hikes on 16th, 98% BoJ hikes 18th (per Bloomberg futures pricing); hikes coming as central banks try to restore credibility to ward off surge in bond yields (biggest threat to AI capex + K-shape consumer booms); we say Fed hike with stalled payrolls (Chart 3) = credibility & peak yields... why duration (RTY, XBI, KRE, REIT) keeps working, nouveau-leveraged Mag7 on cusp of upside breakout.

Tale of the Tape: \$4/gallon gas, 160 dollar-yen, 5% UST bond yield “Maginot Lines” for US admin hence policy interventions via FX, bond buybacks, monetary policy (pressure on BoJ to raise policy rate that’s averaged 0.1% this century – Chart 4); policy panic working (see surging Japan yen); “whatever it takes” policies to maintain nominal macro boom and asset price bull... stay long commodities & debasement hedges, e.g. gold.

The Biggest Picture: 10-year rolling return from US stocks 15%, commodities 11%, Treasuries -2% (worst of past 100 years – Chart 2); negative long-run returns great entry points for stocks in 1939, 1974, 2009 (Chart 5), commodities in 1933, 2018 (Chart 6); US midterms not “regime change” election like Thatcher/Reagan ’80, BREXIT/Trump ’16, but Fed hike, UST buybacks, rising risk midterms show voter priority “affordability” not lower taxes, faster AI data center expansion... lower Q4 yields good contrarian play.

Chart 2: Negative long-run returns... great entry points

US 15-year+ Treasuries: 10-year rolling annualized returns (%)

Chart 1: BofA Bull & Bear Indicator

Down to 9.6 from 9.7

Source: BofA Global Investment Strategy. The indicator identified above as the BofA Bull & Bear Indicator is intended to be an indicative metric only and may not be used for reference purposes or as a measure of performance for any financial instrument or contract, or otherwise relied upon by third parties for any other purpose, without the prior written consent of BofA Global Research. This indicator was not created to act as a benchmark.

BofA GLOBAL RESEARCH

Weekly Flows: \$30.0bn to cash, \$18.3bn to bonds, \$3.2bn to gold, \$2.8bn to stocks, \$0.5bn to crypto.

Flows to Know:

- Crypto: \$0.5bn inflow, past five weeks \$5.5bn inflow, biggest since Oct'25 (Chart 12),
- Treasuries: \$6.2bn inflow, 10th week of inflows,
- IG bonds: \$9.2bn inflow, 22nd week of inflows,
- Bank loans: \$0.6bn outflow, biggest since Mar'26,
- Equities: \$2.8bn inflow, smallest inflow of past nine weeks (Chart 10),
- China equities: \$5.3bn outflow, 5th week of outflows,
- Tech: \$1.5bn outflow, biggest since Jun'26 (Chart 11),
- Financials: \$0.9bn outflow, 5th week of outflows.

BofA Private Clients: \$4.7tn AUM... 66.1% stocks, 17.2% bonds, 9.4% cash (record low); past week sees biggest weekly outflow from equities since Oct'25 (Chart 9); equity ETF share count down 0.1% past week, up 6.9% YTD; past 4 weeks private clients buying IG bond, municipal bond, TIPS, HY bond ETFs, and selling staples, healthcare, energy ETFs.

BofA Bull & Bear Indicator: down to 9.6 from 9.7 on tech outflows partially offset by stronger global stock market breadth; positioning in extreme bull territory; “sell signal” triggered May 26th; since then, SPX +2.0%, ACWI +1.9%; “old” Bull & Bear Indicator at 7.9 (see [BofA Bull & Bear Indicator report](#)).

Trading the Voters...

Midterms not “regime change” election, e.g. Thatcher/Reagan in 1980 = end of inflation/start of bond bull, BREXIT/Trump in 2016 = end of globalization = start of commodity bull; midterms unlikely to change trajectory of US government spending; 2020s decade of political populism as MAGA (Reform party in UK) and Democratic Socialists of America (Greens in UK) culmination of post-GFC Tea Party and Occupy Wall St insurgents; populists (right or left) spend to stay popular... why 2020s decade of fiscal excess, nominal GDP boom (past six years up 63% in US from \$20tn to \$32tn) and “Anything But Bonds” strategic asset allocations; investors not fearful of midterms saying POTUS governs through Executive Orders not Congress (277 thus far, on track for most since Truman), and say DEM sweep unlikely given tough Senate “map”; asked most likely outcome from midterms in [August BofA Fund Manager Survey \(see report\)](#), 47% said GOP Senate & DEM House, 23% said DEM sweep, 9% said GOP sweep/maintains control of Congress (current GOP Senate majority is 53-47, in House 218-212).

Senate map tough for DEMs... must flip 4 of 6 most vulnerable GOP seats in North Carolina (current probability of DEM flip = 92%), Maine (69%), Alaska (64%), Ohio (55%), Texas (51%), Iowa (37%); and DEMs must defend vulnerable seats in Georgia (94% = current prob of DEM hold), New Hampshire (84%), Michigan (65%); key battleground states for investors to watch... Ohio, Texas, Iowa, Michigan (Table 1); note Wall St already focused on Texas Governor race between GOP incumbent Abbott (currently polling 49% according to Real Clear Politics) & DEM challenger Hinojosa (45%), seen as big referendum on AI data center expansion (Abbott recently forced to announce pause to arrest decline in polling numbers).

But DEM sweep likelihood rising; Trump Presidential approval number ranges from 35-40%, significantly below historical average 2 months ahead of midterms (53% - Chart 7 and Table 2) since FDR; Polymarket probability now shows DEM sweep 50% (vs., GOP

Senate DEM House 35%, GOP sweep 10% - Chart 8); DEM sweep threat to asset prices... electoral shift from populist capitalism to populist socialism says next big direction in tax & regulation up not down (EPS negative)... policies to lower inflation, healthcare, improve affordability challenge K-shape wealth boom, AI capex boom, stocks "too big to fail" Wall St zeitgeist; loss of political capital = less ability for Trump to coerce resources, corporations, foreign governments into support for policy priorities of AI war with China, resource monopolization.

We say DEM sweep = big risk-off... slump in stocks (>10%), US dollar, bond yields into year-end; international stocks outperform on less trade & military wars; but Europe outperforms Asia (loses Trump AI friend); we say best hedge for DEM sweep is short financials & US dollar; in contrast, a surprise GOP sweep (maintain House/Senate) control = big risk-on... green light for AI bubble and positive US dollar ("exceptionalism returns"); scenario of "GOP Senate, DEM House" = modest risk-on... "gridlock = goldilocks".

BofA GLOBAL RESEARCH

Disclaimer: The indicators identified above as the BofA Bull & Bear Indicator, MVP Model, BofA Global Breadth Rule, BofA EM Flow Trading Rule, BofA Global Flow Trading Rule, BofA Global FMS Macro Indicator, BofA Global FMS Cash Rule, Global Wave, Sell-Side Indicator, and Global Financial Stress Indicator are intended to be indicative metrics only and may not be used for reference purposes or as a measure of performance for any financial instrument or contract, or otherwise relied upon by third parties for any other purpose, without the prior written consent of BofA Global Research. These indicators were not created to act as a benchmark.

The analysis of the BofA Bull & Bear Indicator in this report is back-tested and does not represent the actual performance of any account or fund. Back-tested performance depicts the hypothetical back-tested performance of a particular strategy over the time period indicated. In future periods, market and economic conditions will differ and the same strategy will not necessarily produce the same results. No representation is being made that any actual portfolio is likely to have achieved returns similar to those shown herein. In fact, there are frequently sharp differences between back-tested returns and the actual results realized in the actual management of a portfolio. Back-tested performance results are created by applying an investment strategy or methodology to historical data and attempts to give an indication as to how a strategy might have performed during a certain period in the past if the product had been in existence during such time. Back-tested results have inherent limitations including the fact that they are calculated with the full benefit of hindsight, which allows the security selection methodology to be adjusted to maximize the returns. Further, the results shown do not reflect actual trading or the impact that material economic and market factors might have had on a portfolio manager's decision-making under actual circumstances. Back-tested returns do not reflect advisory fees, trading costs, or other fees or expenses.
